

MALAMOO TP-9

ASSEMBLY INSTRUCTIONS

Step One: Assemble part A of the support pole, ensuring all sections are fully inserted into each other [Figure 1].

Step 2: Spread out the tent on the ground in your preferred location. Pull out the corners and loosely peg the tent to the ground [Figure 2].

Step Three: Go inside the tent with assembled Support Poles, insert the top end of pole A in the tent apex, insert pole B and align the poles to sit on the reinforced padding on either side of the tent floor. Pull out the corners and firmly peg the tent to the ground [Figure 3]. In windy conditions, ensure all guy ropes are securely pegged to the ground as illustrated.
