

OZTENT TAGALONG FLY

SETTING UP YOUR TAGALONG FLY

- 1.** It's easiest to zip your Tagalong Fly on before you set up your Tagalong Tent. **Important notice:** Use top zipper (A) for the Tagalong Fly. Use bottom zipper (B) for the Tagalong Tent.

- 2.** Peg all the guy ropes down to secure your Tagalong Fly. **Important notice:** Do not place the eyelets on your Tagalong Fly on the poles supporting the Tagalong Tent. It may cause tears.

PACK AWAY

Pack your Tagalong Fly away in the reverse order of putting up. After, take your poles and pegs out. Place it inside your carry bag.

Please ensure when packing away that there are no insects inside as these little pests will eat their way out causing holes to appear in the material.

CONDENSATION

To reduce condensation use your Tagalong Fly. Your Tagalong Fly is designed to collect humid air that pass through your Tagalong Tent. It is normal to find the underside of the fly covered in water droplets in humid conditions.

WARNING

Never use any fuel-burning products (stoves, lanterns, heaters, etc.) inside or within proximity of this tent. Use of fuel-burning products inside or within proximity of the Tagalong Fly can result in the accumulation of dangerous concentrations of carbon monoxide – a colourless, odourless gas. Breathing carbon monoxide will cause serious injury or death. Avoid spraying your Tagalong Fly with deodorant as it will destroy the waterproofing.

Keep all flame and heat sources away from the Tagalong Fly. The Tagalong Fly is made with flame resistant fabric but it is not fireproof. The fabric will burn if left in continuous contact with an open flame or other heat source. Failure to keep all flame and heat sources away from the Tagalong Fly can result in a fire that can burn.

USING AND CARING

Even though your Oztent Tagalong Tent is waterproof the seam on your Tagalong Fly zipper may leak. An age old remedy if this happens is to carry a wax stick with you when you go camping. If you do notice the seam has a leak, simply rub the wax stick on the exterior of the stitch line. This will create a waterproof barrier quickly and easily. If cared correctly, your Oztent Tagalong Fly will still be around for the next generation of campers to enjoy.
